

Q4.

The best project I have worked on yet is the development of my club's website. I'm the web development head of my college club named "Webarch" where we recently developed the club's website. This project was frontend intensive and was developed using technologies like Reactjs, React Bootstrap, CSS, Material UI and Firebase.

I developed the UI of the contact us section which was a very unique UI. I also developed the functionality of the contact us section where the website user can write their messages and we can receive the messages via firebase.

This project gave me the opportunity to learn new frontend technologies like react bootstrap and material UI.
